During MAX 2019, the company announced plans to bring many of its most popular creative tools to the Web, creating what is colloquially known as "Photoshop for the Web." These efforts align with the company's goals of transforming the creative pipeline by making it easier to interact with powerful tools anywhere in digital life. The Photoshop on the Web initiative, which will launch a limited set of beta features in the app client before wider availability, is the result of a multi-year effort led by Jason Schober. The Photoshop Elements editor offers you a more intuitive way to do that. The top toolbar corner brings you everything you need to work with the picture (or layer, in Photoshop-speak). You can apply Vanish or blur effects and you can also add layer styles to make more complex looks more easily. You can use Actions to take your media and transform it into a final image. You can add an Instagram-like filter in seconds without even leaving the desktop.
